

SHAFT SEAL

Our shaft seals can be fully adapted to your application and environment thanks to our wide range of designs combined with our materials' range.

Our standard seals are available in NBR and FKM.

We also design custom solutions specifically adapted to severe or standardized applications.

Our rubber compounds are formulated and developed by our materials laboratory in accordance with the regulations in force (REACH regulations, health standards, etc.). All our compounds are manufactured in Hutchinson's factories. The traceability and conformity of our materials are guaranteed. Standard or specific compounds are available in the different families of elastomers: NBR - EPDM - HNBR - FKM.

TECHNICAL FEATURES

- Temperature range : from -45 to +200°C
- Bi-directional shaft rotation

- Diameters : shaft Ø from 5 mm to 400 mm
- Materials : NBR, ACM, AEM, FKM, EPDM

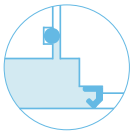

BENEFITS

- Reliability
- Customizable
