

Hutchinson at Farnborough 2026: strengthening Aerospace supply chains for the next generation of aircraft programs

FARNBOROUGH, United Kingdom 23rd July 2026 — At Farnborough International Airshow 2026, Hutchinson showcases the manufacturing footprint, operational agility and execution capabilities it brings to major aerospace programs, helping customers meet rising demand and prepare for the next generation of aircraft and engines.

At Farnborough International Airshow 2026, Hutchinson is highlighting the industrial capabilities it brings to aircraft and engine manufacturers facing growing production demands and ongoing supply chain pressures.

With more than 50 years of industrial presence in the United Kingdom, Hutchinson contributes to major European and international aerospace programs through a global manufacturing network and a local-to-local approach. This footprint provides the capacity and agility needed to support customers as production rates increase and has enabled the Group to adapt to program ramp-ups and take over existing work packages while maintaining technical specifications and delivery commitments.

For manufacturers, maintaining continuity of supply while increasing output remains a key challenge. Hutchinson's industrial footprint is designed to provide the responsiveness and operational stability needed to support program execution over the long term. ***"In today's environment, execution is as important as engineering expertise"***, states **Nicolas Orance, SEVP Aerospace, Defense and Industry at Hutchinson**. ***"Tomorrow aerospace leaders will not be selected only for their technologies, but for their ability to industrialize, scale and execute flawlessly at global level. Hutchinson is building that capability today"***.

Europe's next generation of aircraft will require industrial partners who can think beyond the tier system; anticipating, adapting and absorbing complexity without passing it upstream. The Farnborough Airshow provides an opportunity for Hutchinson to discuss the practical challenges facing aircraft and engine manufacturers and the industrial capabilities required to support current and future programs.

About Hutchinson

Hutchinson designs and delivers multi-material and multi-process solutions that address the most demanding industries, including Aerospace, Automotive and Industrial markets. The Group relies on strong scientific expertise in acoustics and vibration, sealing systems, fluid transfer and thermal management, sensing and actuation, protection and structural solutions, and power transmission.

For its Aerospace and Defense activities, Hutchinson operates 38 production sites worldwide and follows a local manufacturing strategy to remain close to customer needs. Its proven capability to industrialize and produce at scale, with high levels of responsiveness and reliability, enables the Group to meet the stringent requirements of the aerospace sector.

Hutchinson generated revenues of €5.0 billion in 2025 and employs 40,000 people across 26 countries.
