

Strategic cooperation between Hutchinson and Leju Robotics paves a new way for industrial embodied intelligence

Hutchinson and Leju Robotics officially signed a strategic cooperation agreement establishing Leju Robotics as Hutchinson's key partner for embodied intelligence in China. Through joint development, technology integration, and real-world testing, the two partners aim to accelerate the deployment of robotic solutions for high-end manufacturing.

Frédéric Le Du, Senior Executive Vice President Asia of Hutchinson and Chang Lin, CEO of Leju Robotics, attended the signing ceremony together at Hutchinson's Suzhou plant. Following the signing, teams from both companies toured Hutchinson's exhibition hall, laboratories and production facilities, and watched on-site robot demonstrations, laying a solid foundation for further in-depth collaboration.

Leveraging this strategic cooperation as a cornerstone, both parties will focus on typical industrial scenarios including intelligent factory inspection, production line logistics coordination and precision assembly assistance to carry out pilot projects and scenario verification.

In parallel, the two sides will explore key technical routes covering production operation assistance, in-house logistics and human-machine collaboration to overcome bottlenecks in reliability, adaptability and performance. Through combined research and development as well as coordinated product adaptation, the parties will jointly create demonstration cases for industrial applications and build a replicable and scalable benchmark for embodied intelligence in the industry.

Frédéric Le Du, Senior Executive Vice President Asia of Hutchinson, commented: *"The rapid development of embodied robotics in Asia is creating new opportunities across the entire industrial value chain. We are delighted to collaborate with Leju Robotics, a recognized leader in humanoid robotics that has demonstrated strong innovation capabilities and a clear vision for industrial deployment. By combining Leju's expertise in embodied robotics with Hutchinson's technologies and industrial know-how, we aim to explore new industrial applications and create long-term value for customers and industry alike. More importantly, this agreement marks the beginning of a trusted relationship built on complementary strengths, shared ambitions, and a common commitment to innovation. Together, we look forward to exploring future opportunities that will contribute to the growth of the embodied robotics ecosystem and the transformation of industry".*

Chang Lin, CEO of Leju Robotics, stated: *"The embodied intelligence industry is currently at a critical turning point toward large-scale industrial implementation. As a leading company in the industrial application of embodied intelligence, Leju Robotics is very honored to enter into a deep strategic partnership with Hutchinson, a global industry benchmark with strong industrial expertise. We will deeply integrate our respective*

technologies and industrial experience, work together to refine benchmark demonstration solutions for embodied intelligence in key industrial scenarios, explore entirely new application spaces suited for industrial manufacturing systems, and promote the industrialization of humanoid robots in specialized industrial settings”.

About Hutchinson

Hutchinson designs and delivers multi-material and multi-process solutions for the most demanding industries, including Aerospace, Automotive and Industrial markets. The Group relies on strong scientific expertise in acoustics and vibration, sealing systems, fluid transfer and thermal management, sensing and actuation, protection and structural solutions, and power transmission.

Across industrial markets, Hutchinson supports customers with advanced technologies that improve equipment performance, reliability and durability. Its solutions are used in a wide range of applications, from manufacturing and automation to energy, mobility and next-generation industrial systems.

Hutchinson generated revenues of €5.0 billion in 2025 and employs 40,000 people across 26 countries.
